Hi team,

Here is my contribution summary for Milestone 5.

As Front End Lead, my main contributions to the *Pathwise* project included:

- Leading the frontend polish and usability improvements for the final milestone.
- Working on the main user-facing flows, especially browse/search, dashboard, resource, goals, and navigation pages.
- Improving mobile responsiveness so the application would present more cleanly during the final demo.
- Cleaning up UI issues such as spacing, layout consistency, empty states, loading states, and general page polish.
- Simplifying the signed-in navigation experience so users are not overwhelmed by too many visible options at once.
- Improving the admin dashboard UI so it better matches the rest of the product's design and user experience.
- Helping connect frontend pages to backend moderation and status updates so admin and profile-related flows worked correctly.
- Auditing the frontend against Milestone 5 requirements to make sure our demo path covered the required product functionality.
- Helping prepare the application to be more polished, organized, and demo-ready overall.

Number of GitHub submissions to the team branch: 35

Thanks,

Damian Perez
Front End Lead
